

SPoT Coffee

Inspired by Seattle coffee houses, SPoT Coffee brings the taste of fresh roasted gourmet coffee to Western New York and Toronto. Their beans are roasted in small batches, and then mixed in rich flavourful blends that are unique to SPoT Coffee. They are sure that you will enjoy their coffee as well as the atmosphere in each of their unique cafe's.

Gregory Signs, in collaboration with SPoT Coffee, created a soothing/private atmosphere for their unique cafe's. A window frosted vinyl theme gives that privacy setting with its subtle graphic design that enhances interiors, as well as exteriors. It is all possible with our high quality grade frosted vinyl. Frosted vinyl film when applied to glass is durable, washable and will not permanently mark the window. It can be changed over time to suit the needs of your business, home or office. While it diffuses direct sun, it will not block out daylight. Great for privacy windows in offices, store front display windows, mirrors, subtle forms of lettering on glass and graphics on auto glass.

Frosted vinyl version by GS.

LEDs

are considered the hottest out-door advertising medium of today due to the brightness and superior image quality they can produce. No other type of media has the image flexibility and attractiveness that can grab people's attention on a busy street.

By using colour, light and motion, messages are not only attractive, but also impossible to ignore. Digital displays available in multiple configurations including single-line, scrolling signs, multi-line information boards, full-matrix electronic billboards, stock tickers, true colour large LED video walls for high impact out-door advertising displays.

The "smart in the city" summer tour 2005 gave prospective customers in the Toronto area a chance to get up close and personal with smart experience.

In 2006, Gregory Signs takes great pride to take part of the "C-Smart" road show taking part in putting together an LED Display which measures more than four feet tall by twenty feet wide. It displays GELcore LED System. GELcore is up to 60% more energy efficient than neon and features a polarity insensitive electrical design that simplifies and speeds on-site installation. GELcore LLC drives innovation, energy efficiency and cost savings for industries that use LED products, systems and solutions. Fitted with patented, low-voltage, long-life LED light engines, GELcore solutions deliver world-class, GE-grade performance.
