

Crêpe de Licious

There's nothing like a commercial canopy to expand your visibility, both night and day. Canopies can be illuminated, decorated or used as signage. Brighten a dull store front, transform retail centers, restaurants and hotels with an unlimited array of design possibilities. Add a logo or graphic to show off your name and give you round-the-clock visibility.

Signs has put a reality to Crepe de Licious' philosophy and has turned its French atmosphere into a living space.

ufacturing by Gregory Signs.*

Commercial Awnings add a whole new look, creating a stunning new identity for your business. Today's awnings provide fashion with function. They protect your customers from nature's elements including sunlight, wind, rain and snow. Awnings can enhance the appearance of any store, providing shelter and attractive signage. As signage, they act as an efficient marketing tool for businesses and extend a welcome to your customers.

Crepe de Licious has put its trust in Gregory Signs' hands since 2006 and Gregory Signs has helped Crepe de Licious make its innovative and vivid concepts come true. Crepe de Licious is different from all other fast food or kiosk stands. This unique cafe will be the first of its kind in a Canadian mall to offer the customer a French delicacy, "the crepe" on the go. The crepe is a well known cuisine loved by both Europeans and North Americans and has been alive for centuries. Simple crepes filled with fruit, vegetables, meat and sweets will entice one and all.

The basic business philosophy of Crepe de Licious is to give the customer the crepes and paninis with the best taste and value in a French atmosphere. Gregory

Back in the day...

Gregory Signs back in 1986 used to own a small shop back on 2109 Steeles Ave. West. It consisted of four router tables and a couple of small plotter machines, as well as an engraving machine. Nowadays at Gregory Signs, relocated to a 20,000 square foot facility on 137 Buttermill Ave., Concord, we operate Gerber Edge 2, Gerber Sabre, Engraving Xenatech 2D Router Table and a Gerber Emboss Track plotting machine which allows us to cut up to 50 yards of vinyl in one shot. Our in-house manufacturing saves us from expensive subcontracting work, which gives us the chance to give our customers a better deal for amazing quality services and products. GS Shop 1986>
